

Clean & Disinfect Your Space

Clean and disinfect high-touch surfaces daily in household common areas (e.g. tables, hard-backed chairs, doorknobs, light switches, remotes, handles, desks, toilets, sinks)

Wear single-use gloves when cleaning and disinfecting surfaces. If reusable gloves are used, those gloves should be dedicated for cleaning and disinfection of surfaces for COVID-19 and should not be used for other purposes. Consult the manufacturer's instructions for cleaning and disinfection products used. Clean hands immediately after gloves are removed.

If surfaces are dirty, they should be cleaned using a detergent or soap and water prior to disinfection.

For disinfection, diluted household bleach solutions, alcohol solutions with at least 70% alcohol, and most common EPA-registered household disinfectants should be effective.

Prepare a bleach solution by mixing:

- 5 tablespoons (1/3rd cup) bleach per gallon of water -or-
- 4 teaspoons bleach per quart of water -or-
- 3 teaspoons bleach per 24 oz spray bottle

*Diluted household bleach solutions can be used if appropriate for the surface. Follow manufacturer's instructions for application and proper ventilation. Check to ensure the product is not past its expiration date. **Never mix household bleach with ammonia or any other cleanser.** Unexpired household bleach will be effective against coronaviruses when properly diluted.*
